

## SECTION 1 GEOGRAPHY

## GeoActivity

Use with Central America & the Caribbean Geography & History, Section 1.1, in your textbook.

Go to Interactive Whiteboard GeoActivities at **myNGconnect.com** to complete this activity online.

## 1.1 PHYSICAL GEOGRAPHY

## Map Economic Resources

Read the passage below to learn more about the economic resources of Central America and the Caribbean Islands. Then complete the map and answer the question.

### Physical Geography and the Economy

The landscape and climate of Central America and the Caribbean Islands are important to this region's economy. The rich volcanic soil found in the mountains of Nicaragua and El Salvador is ideal for growing coffee, which is one of the largest crops in both countries. Farmers grow bananas and other fruits and vegetables along the warm coastal plains of northern Honduras. Tourists are attracted to Costa Rica's tropical rain forests and the wildlife found there.

The warm climate, fertile volcanic soil, and lush coastal plains of the Caribbean Islands allow for sugarcane farming throughout the region. Sugarcane is the largest agricultural product in the Dominican Republic and Jamaica. Tourism also makes up a large part of the region's economy. Many people visit the beaches of Puerto Rico, the Bahamas, and other islands in the region each year.

- 1. Complete Maps** Create symbols for the resources and label them in the legend. Place them on the map in the main locations stated.
- 2. Interpret Maps** Which symbols on your map would be least likely to appear on a resource map of a cold climate? Which would be more likely to appear?
